

Frontend : Develop a full stack application for following cases

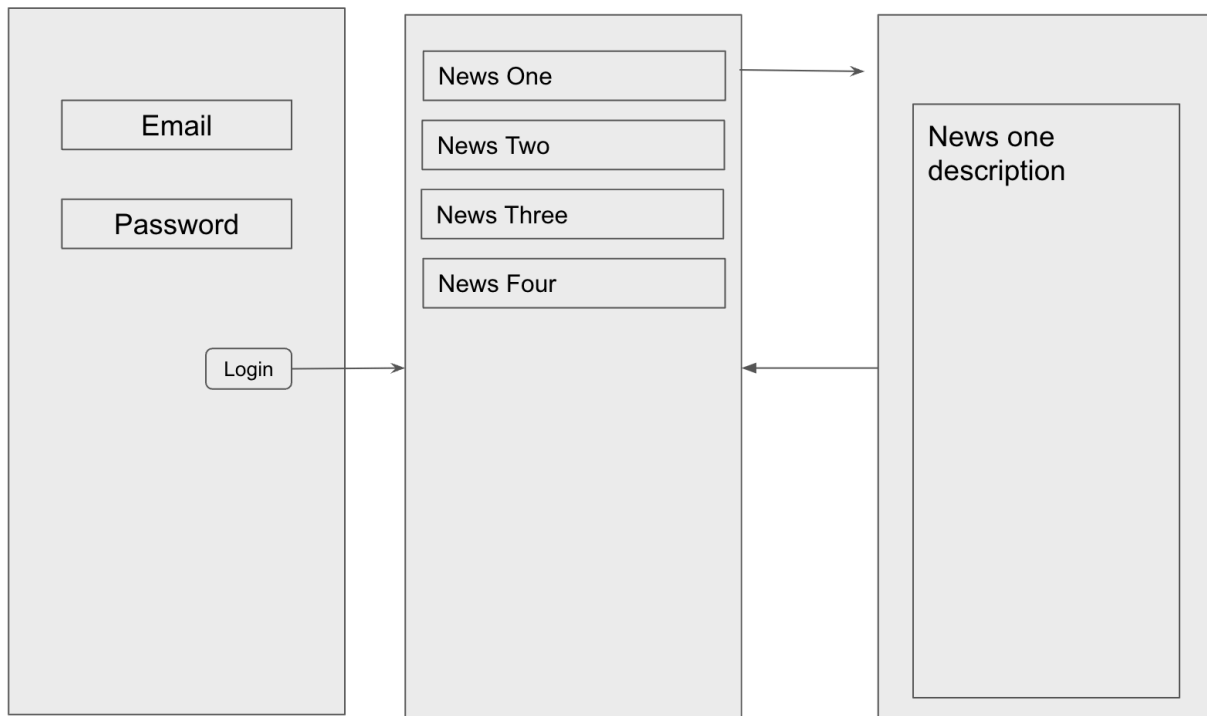

1. User can login to the app
  - Consider only email password login
  - User confirmation via OTP
2. After login, the user can see a list of “News”.
  - NEWS can have title
  - Tapping on any NEWS, users can see detailed screens where you will show a description.
  - Users can press back to come to the NEWS page.

NOTE:

1. Use Amplify Auth for login [to speedup, you can create a portal directly. So no need to create signup page]
2. Use the attached JSON file to parse and show NEWS list, and description.
3. Make the UI as responsive to run apps on different devices.

Show us your expertise for frontend, making the app with good UX and UI .

Following image is just for reference.

The JSON file is below for NEWS

```
{
  "news": [
    {
      "title": "Job shadowing sparks students' career potential",
      "url": "#",
      "description": "Job shadow program connects record number of students with potential employers, and helps alumni give back."
    },
    {
      "title": "Breaking down barriers, leading equality",
      "url": "#",
      "description": "Fourth-year medical student encourages openness, involvement for LGBTQ community on campus."
    },
    {
      "title": "Surge in designer drugs, tainted 'E' poses lethal risks",
      "url": "#",
      "description": "With up to 10 new designer drugs flooding streets every year, more education is needed to convey risks, especially among youth, say UAlberta researchers."
    },
    {
      "title": "UAlberta set to bask in a rainbow of pride",
      "url": "#",
      "description": "Beginning Feb. 26, Pride Week celebrates an often invisible campus population."
    },
    {
      "title": "Crowding around campus projects",
      "url": "#",
      "description": "U of A looks to crowdfunding to help launch first Alberta-made satellite, support other campus projects."
    }
  ]
}
```
